

1- Create an **interface** called **Course** with the following properties:

- id
- title
- instructor
- price
- seats
- Image
- catId

2- Create a new component called: courses

3- Inside the component, create an **array of courses** containing at least **5 courses**.

4- Display the courses using **@for**.

Each course card should display:

- Course Title
- Instructor Name
- Price
- Seats Available
- Course Image

Use **Interpolation** to display:

- course title
- instructor name
- price

- Use **Property Binding** to display the **course image**.

4- Add a **Register button** , When the user clicks the button:

- Decrease the number of **available seats by 1** Use **Event Binding**.
- If the course **seats = 0**, display: Course Full Use **@if**
- Use **ngClass** , **class** to style the course:

If seats = 0 → show the card text in **red**.

Filter Courses by Category

1. Update the **Course interface** by adding a new property:
 - category (e.g., Programming, Design, Business).
2. When creating the **courses array**, make sure each course has a **category**.

Example categories:

- Programming
 - Design
 - Marketing
 - Business
3. Create a **dropdown list (select)** that contains all course categories.

Example options:

- All
 - Programming
 - Design
 - Marketing
4. Use **Two-Way Binding (ngModel)** to store the selected category in a variable called: `selectedCategory`

5. When the user selects a category:
 - Display **only courses that belong to that category**.

notes:

1. Disable the **Register button** if seats = 0.
2. Display "**Almost Full**" if seats $\leq$ 2.
3. Use **ngStyle** or **style** to change the background color when seats are low.
